GRAIN PUMPS

Able to replace the need of all traditional components, (including conveyors, bucket elevators, and chain conveyors) grain pumps are a single, versatile continuous system connected to the top and bottom of each silo, allowing selective filling and unloading with ease.

Grain pumps improve loading and unloading times, moving grain at high capacities while minimising damage, horsepower and maintenance requirements. Grain can be moved from one silo to another, or blended for improved marketability. In addition, processing functions such as drying cleaning and rolling are easily incorporated. All systems come with push button automation and can be easily expanded as required.

Allied Grain provides clients with exclusive access to Hutchinson's line of grain pumps including loop and double run options. An entire family of attachments and options provide a flexible system designed to suit the end user.

GRAIN PUMP FEATURES

**Optional
Sealing Valves**

**Fit optional sealing valves
to ensure your silo seal to
AS2628-2010 is
maintained**

**Ground operated manual
discharge gates**

Electric also available

**Use your existing Auger to feed Hutchinson Double Run
Grain Pump with ground operated discharge gates**

GRAIN PUMP FEATURES

Add Grain pumps to existing silos

Use an existing auger to feed into hutch grain pumps

BUCKET ELEVATORS

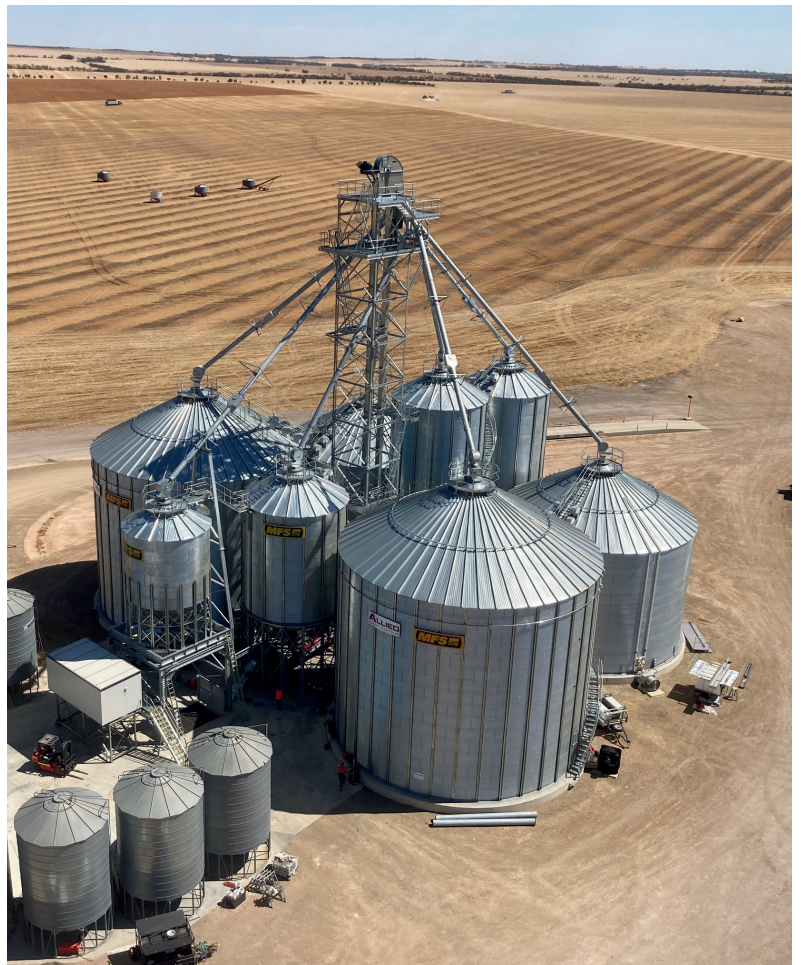

Bucket elevators offer a simple yet reliable method for moving grain and other bulk materials vertically, or on an incline.

As a proud partner of York Industries, Allied Grain Systems has exclusive access to an innovative range of bucket elevators that are customised to meet your specific requirements.

York's commercial and industrial ranges include systems to suit grain terminals, feed mills and port facilities, food processing, specialty grains, fertiliser, seed processing and sand and gravel operations.

All systems come with a low impact head to reduce grain damage and to ensure proper discharge. As well as plastic and steel buckets, there are a number of options that can be included into the design and construction of a bucket elevator to suit your requirements and maximise system efficiencies.

Allied Grain System's range of bucket elevators are capable of moving up to 50 tonnes of grain per hour, to a height of 20 metres.
